## PREFACE

This report presents the results of a detailed Air Force Occupational Survey of the Bioenvironmental Engineering (AFSCs 90730, 90750, 90770, 90790, and 90700 CEM Code) and Environmental Medicine (AFSCs 90830, 90850, 90870, 90890, and 90800 CEM Code) career ladders. This report was requested by Aerospace Medical Division, Education and Health Support, Brooks AFB, Texas. Authority for conducting occupational surveys is contained in AFR 35-2. Computer printouts from which this report was produced are available for use by operating and training officials.

The survey instrument was developed by Ms Terri Morris, Inventory Development Specialist. Dr David E. Williams, Occupational Analyst, analyzed the data and wrote the final report. Administrative support was provided by Ms Anita R. Carter. Ms Rebecca Hernandez provided computer programming support for the project. This report has been reviewed and approved by Lieutenant Colonel Charles D. Gorman, Chief, USAF Airman Career Ladders Analysis Division, Occupational Analysis Branch, USAF Occupational Measurement Center.

Copies of this report are distributed to Air Staff sections, major commands, and other interested training and management personnel (see distribution list on page i). Additional copies are available upon request to the USAF Occupational Measurement Center, Attention: Chief, Occupational Analysis Division (OMY), Randolph Air Force Base, Texas 78150-5000.

USAF Occupational Measurement  
Center

## SUMMARY OF RESULTS

1. Survey Objectives: This survey was conducted to acquire data for use in the review and update of the Specialty Training Standards (STS), Plans of Instruction (POI), and to identify tasks which are actually being performed since the reorganization of these two career ladders.
2. Survey Coverage: Inventory booklets were completed by 599 Bioenvironmental Engineering Personnel (AFSC 907X0) and 684 Environmental Medical Personnel (AFSC 908X0). This sample was representative in terms of MAJCOM and grade distribution, and provides a comprehensive view of jobs performed by personnel in these Air Force specialties.
3. DAFSC and Skill Level Differences: Technical work is primarily done by 3- and 5-skill level personnel in both career ladders. At the 7-skill level, 27 percent of the job time of 907X0 personnel and 38 percent of 908X0 personnel involved technical duties, with supervision and management occupying the remainder of the time.
4. Specialty Jobs (Career Ladder Structure): Based on similarity of tasks performed, Bioenvironmental Engineering and Environmental Medical Personnel grouped into 11 major jobs. Some jobs were performed by 907X0 members only, while others were distinctly performed by 908X0 personnel. Jobs showing minor overlap across AFSCs include Training, Management and Supervision. Other differences within individual career ladders were the result of increases in experience, which awards greater responsibilities to more senior personnel.
5. AFR 39-1 Specialty Descriptions: The AFR 39-1 Specialty Descriptions for both the DAFSC 907X0 and 908X0 Specialties are supported by survey data. These descriptions provide broad overviews of the respective duties and responsibilities of Bioenvironmental Engineering and Environmental Medicine Personnel.
6. Training Analysis: The Specialty Training Standards (STS) for both AFSCs 907X0 and 908X0 are generally supported by survey data. The STSs for both AFSCs have some tasks not referenced to them which were performed by 20 percent or more of the first-enlistment members. There are areas of the STSs which have no tasks matched. Nonreferenced tasks and unmatched STS areas were recommended for review.

The POI for Course 90730 is generally supported by OSR data; however, there are some unreferenced tasks and unmatched course objectives. The first part of the 90830 course (taught at Fort Sam Houston) and the second part of the 90830 course (taught at Brooks AFB) generally are supported by survey data; however, there are some tasks not referenced to either course, and some course objectives of the Fort Sam Houston course have no tasks matched to them. A review of POIs with unmatched course objectives and nonreferenced tasks has been recommended.

OCCUPATIONAL SURVEY REPORT  
BIOENVIRONMENTAL ENGINEERING AND ENVIRONMENTAL MEDICINE  
CAREER LADDERS  
(AFS 907X0 and 908X0)

INTRODUCTION

This is a report of an occupational survey of the Bioenvironmental Engineering (AFSC 907X0) and Environmental Medicine (AFSC 908X0) career ladders completed by the Occupational Analysis Division, USAF Occupational Measurement Center, in September 1985. Previous surveys of these specialties were completed in December 1978 and March 1980, respectively; however, this is the first time the two specialties have been surveyed together.

Objective

The purpose of this project is to identify tasks which are actually being performed since the reorganization of these career ladders and provide data for use in the review and update of the Specialty Training Standards (STS) and Plans of Instruction (POI). This study was requested by Aerospace Medical Division, Education and Health Care Support, Brooks Air Force Base, Texas.

History

Bioenvironmental Engineering (AFSC 907X0). There have been no major changes in the career ladder structure of the Bioenvironmental Engineering career ladder since its inception in 1951, with the exception of the creation of 90700 CEM Code in 1978. As currently structured, the ladder has 3-, 5-, 7-, and 9-skill levels, and 90700 CEM Code. The title of the career ladder, however, has been changed from "Preventive Medicine" to "Environmental Medicine" and, finally, to "Bioenvironmental Engineering". In 1982, there was a reorganization of tasks and duties designated as 907X0 responsibilities. Several functions which had previously been the responsibility of the 907X0 career ladder were transferred to the 908X0 career ladder. These functions included: respiratory protection, occupational health education, tuberculosis control program, venereal disease control program, communicable disease control program, hearing conservation, sanitary surveys, military quarantine, ratio grade preclearance program, and insect and rodent control.

The primary responsibilities of the 907X0 career ladder, as described in AFR 39-1 Specialty Descriptions, involve conducting periodic bioenvironmental engineering surveys and evaluations, specialized industrial and environmental samples; planning, implementing, conducting, and evaluating industrial hygiene, environmental protection, and radiological health programs to ensure

APPROVED FOR PUBLIC RELEASE; DISTRIBUTION UNLIMITED

insofar as possible, that healthful working conditions are maintained and that the environment is not adversely affected by Air Force operations. In accomplishing the aforementioned duties and tasks, specific standards must be maintained; therefore, a major trend has been the increasing influence of or compliance with the health and safety standards, rules, and regulations of the Occupational Safety and Health Administration (OSHA). OSHA was created by Public Law in 1969 and empowered by subsequent Executive Orders. Since OSHA's inception, there has been a steady increase in its ability to enforce regulations designed to protect employees from hazards present in their working or living environment. Since Bioenvironmental Engineering and Environmental Medicine Personnel are charged with the responsibility of ensuring the safety of a variety of working and living conditions, they are directly affected by OSHA standards, which they must meet or exceed. Two other organizations created to provide some standards and guidelines are: Air Force Occupational Safety and Health (AFOSH) and National Institute of Occupational Safety and Health (NIOSH).

Career Ladder Entry (AFSC 907X0). Personnel entering the Bioenvironmental Engineering career ladder enter technical school after completing basic military training. Technical training for these personnel is conducted at USAFSAM, Brooks AFB, Texas. This entry level course is a 6½-week course designed to train new 907X0 personnel in the activities of Bioenvironmental Engineering.

Environmental Medicine (908X0). The Environmental Medicine career ladder has been in existence since May 1951. A 9-skill level designation was authorized in February 1960. The career ladder remained relatively stable until 1976 when members of the Animal Specialist Career Ladder (908X1) were merged into the specialty. The CEM Code 90800 was created and authorized in October 1978, and is still in use at this time. The title of the career ladder, however, has been changed from "Veterinary" to "Laboratory Animal Care" to "Environmental Medicine". In the 1982 time frame, there was a reorganization of tasks and duties designated as 908X0 responsibilities. Several functions which were previously the responsibilities of AFSC 907X0 career ladder (detailed in the previous section) were transferred to this career ladder.

The basic job of 908X0 personnel, as described by AFR 39-1, is to perform subsistence inspections, food facilities inspections, and assist with animal medical care activities. To properly perform these services, all personnel in this career ladder must attend the basic courses.

The Environmental Medicine career ladder has two authorized Special Experience Identifiers (SEI), SEI 491 and SEI 498. SEI 491 incumbents are responsible for supporting ongoing animal research programs. This Special Experience Identifier is awarded to those incumbents who previously possessed DAFSC 908X1 or to those incumbents who successfully complete the Basic Animal Technician course. It is expected that the use of experience related to SEI 491 will decrease, since the animal function was transferred to the Army in 1982.

SEI 498 personnel generally are stationed overseas, and perform many of the specialized subsistence inspections that United States Department of Agriculture (USDA) or Department of Commerce (USDC) personnel normally perform in the United States.

Career Ladder Entry (AFSC 908X0). Personnel entering the Environmental Medicine career ladder complete a training program designed for entry level personnel. This program is divided into two parts, with an 8-week course taught at Ft Sam Houston and 6-week course taught at Brooks AFB. There are approximately 200 incumbents successfully completing these courses each year.

### SURVEY METHODOLOGY

#### Inventory Development

The data collection instrument used for this occupational survey was USAF Job Inventory AFPT 90-907-532 and 90-908-533. A tentative task list was formulated during visits with technical school personnel at Brooks Air Force Base, to include tasks resulting from the use of Specialty Training Standards (STS), other career ladder documents, and task lists from previous occupational surveys, as a guide. The tentative task lists were refined and validated by subsequent visits to operational units having 907X0 or 908X0 personnel. Bases visited to validate task lists were determined primarily on recommendations of major command functional managers. Bases in order of visits were:

- Brooks AFB (AFSC)
- Kelly AFB (AFLC)
- Randolph AFB (ATC)
- Eglin AFB (AFSC)
- Patrick AFB (AFSC)
- Travis AFB (MAC)
- Mather AFB (ATC, SAC)
- Castle AFB (SAC)
- Nellis AFB (TAC)
- Los Angeles AFS
- Vandenberg AFB (SAC)

These bases were chosen to include representative commands, active flying missions (would have an emphasis on Occupational Health), and nonflying missions (would have emphasis on Epidemiology and Bioenvironmental Engineering functions). A final inventory consisting of 801 tasks grouped under 16 duty headings was developed.

The job inventory consisted of three sections: (1) biographical information, which included items such as name, SSAN, number of months on current job, and number of months of military service; (2) a background information section which included questions about such items as job satisfaction, equipment used, type of organization, job title, and training courses completed; and (3) a task section listing all tasks performed by personnel in both specialties.

### Survey Administration

From June 1984 to December 1984, job inventories were administered by local consolidated base personnel offices to all DAFSC personnel at the 3-, 5-, 7-, and 9-skill levels, and those holding CEM Codes who were eligible to participate in the survey. This included 1,283 members assigned to operational units. Members eligible to participate in the survey were selected from Uniform Airman Record (UAR) data tapes generated by the Air Force Human Resources Laboratory (AFHRL).

### Data Processing and Analysis

Once job inventories are returned from the field, they are prepared so task responses and background information can be optically scanned. Biographical information (such as name, base, and AUTOVON extension) are keypunched onto discs and entered directly into the computer. Once both sets of data are entered into the computer, the tasks, background, and biographical information are merged to form a complete case record for each respondent. Computer-generated programs, using Comprehensive Occupational Data Analysis Program (CODAP) techniques are then applied to the data.

Computer-generated job descriptions are available for DAFSC, TAFMS, and CONUS and Overseas groups, and include such information as percent members performing each task, the average percent time spent performing tasks and the cumulative average percent time spent by all members for each task in the inventory.

### Task Factor Administration

Selected senior DAFSC 907X0 and 908X0 personnel holding the 7-skill level were asked to complete a second booklet for either training emphasis (TE) or task difficulty (TD). The TE and TD booklets are processed separately from the job inventories. The rating information is then used in a number of different analyses discussed in more detail within this report. TE and TD raters were representative of the senior technicians in the field.

Task Difficulty. Each individual completing a task difficulty booklet was asked to rate all tasks on a 9-point scale (from extremely low to extremely high) as to the relative difficulty of each task in the inventory. Difficulty is defined as the length of time required by the average member to learn to adequately perform a task. Task difficulty data were independently collected from 56 experienced DAFSC 907X0 and 56 908X0 personnel. The interrater reliability (as assessed through components of variance of standard group means) for these raters was .93 for 907X0 and .92 for 908X0 personnel. The ratings were adjusted by the computer program so tasks of average difficulty have ratings of 5.00 and a standard deviation of 1.00. The resulting data essentially provide a rank ordering of tasks indicating the relative degree of difficulty for each task in the inventory.

Job Difficulty Index (JDI). After computing task difficulty for each task item, it is possible to compute a Job Difficulty Index (JDI) for the jobs identified in the survey analysis. This index provides a relative measure of which jobs, when compared to other jobs, are more or less difficult. An equation using number of tasks performed and the average difficulty per unit time spent (ADPUTS) as variables is the basis for the JDI. The index ranges from 1.0 for very easy jobs to 25.0 for very difficult jobs. The indices are adjusted so average JDI is 13.0. Thus, the more time a group spends on difficult tasks and the more tasks members perform, the higher the JDI.

Training Emphasis. Individuals completing training emphasis booklets were asked to rate tasks on a 10-point scale ranging from no training required to extremely heavy training required. Training emphasis is a rating of which tasks, in the opinion of the rater, require structured training for first-term personnel. Structured training is defined as training provided at resident technical schools, field training detachments (FTD), mobile training teams (MTT), formal OJT, or any other organized training method. Training emphasis data were independently collected from 61 experienced DAFSC 907X0 and 57 DAFSC 908X0 personnel. The interrater reliability (as assessed through the components of variance of standard group means) for 907X0 and 908X0 raters was .98, which indicated there was a high degree of agreement among raters as to which tasks required some form of structured training and which did not. The average training emphasis rating is 1.21 and the standard deviation (SD) is 1.84 for 907X0 personnel and the average training emphasis rating for 908X0 personnel is 1.56 with an SD of 1.94. Tasks rated highest in training emphasis for 907X0 personnel have ratings of 3.05 and above, while those having high training emphasis for 908X0 personnel have ratings of 3.50 and above.

When used in conjunction with other factors, such as percent members performing, task difficulty and training emphasis ratings can provide an insight into training requirements. This may help validate the lengthening or shortening of specific units of instruction in various training programs.

## Survey Sample

Personnel participating are representative of all user MAJCOM and pay-grade groups. In this study, all eligible personnel holding DAFSC 907X0/908X0 with 3-, 5-, 7-, and 9-skill levels and 90700 CEM Code and 90800 CEM Code were solicited for their responses. Table 1 reflects the major command distribution of personnel assigned to the specialties as of June 1984. Table 2 reflects the percentage distribution by military paygrades. Table 3 reflects the distribution of the survey sample in terms of TAFMS groups. Overall, a representative sample was obtained, with 1,283 (73 percent) of the eligible 907X0 and 908X0 personnel participating in the survey.

## CAREER LADDER STRUCTURE

A key aspect of an occupational survey report is to examine the job structure of the career ladders on the basis of what people are actually doing in the field, rather than on the basis of how official career ladder documents say they are structured. This analysis of job structure is made possible by the use of the Comprehensive Occupational Data Analysis Programs (CODAP). By using CODAP, job functions are identified on the basis of similarity in tasks performed and relative time spent performing the tasks. Using the job structure as a starting point, the pertinent career ladder documents (such as AFR 39-1 Specialty Descriptions, STSs, and POIs) are evaluated.

The career ladder structure analysis process consists of determining the functional job structure of career ladder personnel in terms of job types, subclusters, clusters, and independent job types. A job type is a group of individuals who perform many of the same tasks and also spend similar amounts of time performing them. When there is a substantial degree of similarity between different job types, they are grouped together and labeled clusters. A subcluster is a group of individuals who perform related tasks, but which contain several specific job types that differ from one another, usually in minor ways. Finally, there are often cases of specialized job types that are too dissimilar to be grouped into any cluster. These unique groups are labeled independent job types.

## Specialty Structure Overview

The job structure for Bioenvironmental Engineering and Environmental Medicine was determined by performing a job type analysis of 1,283 survey respondents. Based on task similarity and the amount of time spent performing each task, the jobs performed by these personnel separated into 29 job groups, all but 5 of which grouped into 6 functional clusters. The remaining job groups formed independent job types. The jobs performed are illustrated in Figure 1. The group (GRP) number is a reference to computer-printed information included for use by classification and training managers. The letter "N" stands for the number of people in the group. (The N for a cluster will not

always equal the sum of the groups within the cluster, since only the major job variations are examined in detail). A complete list of the jobs is presented below.

- I. BIOENVIRONMENTAL ENGINEERING SUPERVISORS AND NCOICs CLUSTER (GRP225, N=127)
- II. HEALTH PROTECTION MONITORS CLUSTER (GRP120, N=334)
  - A. Industrial Environmental Monitors (GRP362, N=167)
  - B. Community Health Environmental Monitors (GRP351, N=106)
  - C. Assistant Community Health Environmental Monitors (GRP220, N=6)
  - D. Environmental Survey Personnel (GRP335, N=16)
- III. WATER AND POLLUTION PERSONNEL CLUSTER (GRP071, N=26)
  - A. Assistant Water and Pollution Monitors (GRP170, N=6)
  - B. Water and Pollution Monitors (GRP235, N=9)
- IV. TECHNICAL TRAINING INSTRUCTORS INDEPENDENT JOB TYPE (GRP232, N=9)
- V. GENERAL MANAGERS AND SUPERINTENDENTS CLUSTER (GRP082, N=35)
- VI. ENVIRONMENTAL MEDICINE SUPERVISORS AND NCOICs CLUSTER (GRP159, N=136)
  - A. Environmental Medicine Superintendents and Foremen Job Type (GRP282, N=31)
  - B. Subsistence Inspectors/Supervisors (GRP328, N=44)
  - C. Epidemiological Support NCOICs Subcluster (GRP172, N=61)
- VII. FACILITY AND FOOD INSPECTORS AND EVALUATORS CLUSTER (GRP098, N=81)
  - A. Medical Evaluators Subcluster GRP204, N=23)
  - B. Food Inspectors Subcluster (GRP221, N=8)
  - C. Food Facility Inspectors Subcluster (GRP144, N=44)
- VIII. EPIDEMIOLOGICAL SUPPORT PERSONNEL CLUSTER (GRP051, N=111)
  - A. Community Health Support Personnel (GRP261, N=8)
  - B. Sanitation Evaluators (GRP248, N=18)
  - C. Communicable Disease Control Monitors (GRP256, N=30)
  - D. Environmental Statistics and Followup Personnel (GRP247, N=30)
- IX. ENVIRONMENTAL MEDICINE CURRENCY TRAINING PERSONNEL CLUSTER (GRP146, N=18)
- X. SUBSISTENCE INSPECTORS CLUSTER (GRP165, N=224)

XI. ANIMAL CARE AND LABORATORY PERSONNEL CLUSTER (GRP134, N=24)

- A. Laboratory Animal Research Support Personnel (GRP254, N=5)
- B. Laboratory Animal Medical Care Personnel (GRP201, N=19)

The respondents forming these groups account for 88 percent of the survey sample. The remaining 12 percent, though reporting similar job titles, were personnel whose task performance was too dissimilar to group with any of their career ladder peers.

Job Descriptions

Presented on the following pages are descriptions of each job listed in Figure 1. The information presented is limited to a brief description of the respondents who comprised the job groups and examples of tasks performed which indicate the nature of their jobs. Selected background data are provided for the job groups in Tables 4-6. A more extensive (but not complete) list of tasks performed by each group is provided in Appendix A.

I. BIOENVIRONMENTAL ENGINEERING SUPERVISORS AND NCOICs CLUSTER (GRP225, N=127). These supervisors and NCOICs comprise 12 percent of the sample. Ninety-nine percent hold AFSC 907X0. On an average, they spend approximately 84 percent of their job time on supervisory-related duties, such as organizing and planning, directing and implementing, inspecting and evaluation, and training, while the remaining 16 percent of their time is spent on support functions (performing general administrative procedures). Typical tasks include:

- participate in meetings, such as staff meetings, briefings, conferences, or workshops
- establish organizational policies, office instructions (OI), or standing operating procedures (SOP)
- determine work priorities
- prepare APR
- interpret policies, directives, or procedures for subordinates
- orient newly assigned personnel
- prepare recommendations for awards or decorations
- establish work schedules
- determine requirements for space, personnel, equipment, or supplies
- schedule temporary duty, leaves, or passes
- develop budget or financial requirements
- assign personnel to duty positions

These personnel supervise an average of 3 subordinates, hold an average grade of E-6, have an average of 165 months in service, and perform an average of 177 tasks. Generally, they indicated a high degree of job satisfaction.

II. HEALTH PROTECTION MONITORS CLUSTER (GRP120, N=334). This large group of health protection personnel comprises 26 percent of the survey sample. Their primary functions involve gathering and making use of health protection information. Thirty-six percent of their job time is spent performing tasks related to the duty of conducting radiological health programs and another 28 percent on general administrative procedures. Seventy-two percent of these personnel hold DAFSC 90750, their average grade is E-4, with an average of 55 months in service, and they perform an average of 84 tasks. Common tasks include:

- perform industrial ventilation surveys
- perform noise surveys
- complete AF Forms 2754 (Chronological Record of Workplace Surveillance)
- complete AF Forms 2750 (Industrial Hygiene Sampling Data)
- complete AF Forms 2757 (Illumination Survey Data Sheet)
- perform illumination surveys
- identify hazardous noise areas
- collect breathing zone or personal air samples
- complete DD Forms 2214 (Noise Survey)
- collect air samples from industrial environment
- complete AF Forms 2764 (Industrial Ventilation Survey Face Velocity Method)
- complete AF Forms 2761 (Hazardous Materials Data)
- complete AF Forms 2756 (Noise Survey (Dosimeter))
- complete AF Forms 2758 (Industrial Hygiene Survey Data Sheet)
- complete AF Forms 2751 (Bulk Material Sampling Data)

Fifty-three percent of the health protection personnel are in their first enlistment and a majority rendered positive indications about how they perceive their jobs, utilization of training, and utilization of talents. This cluster contains four job types which are discussed below.

A. Industrial Environmental Monitors (GRP362, N=167). These personnel are health protection personnel primarily responsible for performing Industrial Environmental functions which involve the collection of various survey data and samples used to determine environmental conditions. The two duties which consume a majority of these incumbents' time are general administrative procedures (26 percent) and conducting occupational health programs (36 percent). They perform an average of 97 tasks. Common tasks include:

- complete AF Forms 2754 (Chronological Record of Workplace Surveillance)
- perform industrial ventilation surveys
- complete AF Forms 2757 (Illumination Survey Data Sheet)
- complete AF Forms 2750 (Industrial Hygiene Sampling Data)
- collect air samples from industrial environment
- perform illumination surveys
- perform noise surveys

- collect breathing zone or personal air samples
- collect potable water samples for analyses
- complete AF Forms 2764 (Industrial Ventilation Survey Face Velocity Method)
- complete AF Forms 2761 (Hazardous Materials Data)
- identify hazardous noise areas
- drive military motor vehicles
- complete DD Forms 2214 (Noise Survey)
- complete AF Forms 2578 (Industrial Hygiene Survey Data Sheet)
- perform bulk sample collection

A majority (80 percent) of these personnel hold DAFSC 90750; 74 percent are in their first enlistment with an average of 40 months in the military services.

B. Community Health Environmental Monitors (GRP351, N=106). These Community Environmental Health Protection Monitors are primarily responsible for collecting samples and conducting surveys to determine community environmental conditions and acquiring data to make necessary corrective recommendations. The main distinction between these personnel and the previous group is the work location or environment and clientele served. A majority (71 percent) of these airmen's job time is spent on two duties: general administrative procedures and conducting occupational programs (28 percent and 43 percent, respectively). They perform an average of 79 tasks. Common tasks include:

- collect breathing zone or personal air samples
- perform noise surveys
- complete DD Forms 2214 (Noise Survey)
- identify hazardous noise areas
- perform illumination surveys
- collect data on equipment, aircraft, or other operations which produce noise
- recommend controls for hazardous noise
- interpret PEL values and notations
- interpret results of air sample analyses and make recommendations
- recommend personal protective devices
- investigate possible chemical health hazards
- select or check calibration of sampling devices used in detecting hazardous agents

These members hold an average grade of E-4 and 34 percent are in their first enlistment.

C. Assistant Community Health Environmental Monitors (GRP220, N=6). This small group of airmen perform functions related to community health. Their tasks involve performing general administrative procedures and occupational health programs. They also perform more tasks related to NCOIC functions than the Community Health Environmental Monitors described above. Common tasks include:

- perform noise surveys
- complete DD Forms 2214 (Noise Survey)
- complete AF Forms 2757 (Illumination Survey Data Sheet)
- identify hazardous noise areas
- complete AF Forms 2756 (Noise Survey (Dosimeter))
- complete AF Forms 2751 (Bulk material sampling data)
- recommend controls for hazardous noise
- participate in meetings, such as staff meetings, briefings, conferences, or workshops
- interpret results of air sample analyses and make recommendations
- complete AF Forms 2752 (Environmental Sampling Data)

D. Environmental Survey Personnel (GRP335, N=16). These 16 airmen are responsible for conducting a variety of surveys. Although they perform some other tasks, their duties closely parallel sample collection. These personnel are somewhat inexperienced, having an average of only 23 months in the military and are performing routine health protection surveys. Seventy-seven percent of their job time is spent on two duties: administrative procedures and conducting occupational health programs (41 percent and 37 percent, respectively). Common tasks include:

- complete AF Forms 2761 (Hazardous Materials Data)
- complete AF Forms 2754 (Chronological Record of Workplace Surveillance)
- perform industrial ventilation surveys
- perform illumination surveys
- complete AF Forms 2757 (Illumination Survey Data Sheet)
- drive military motor vehicles
- complete AF Forms 2764 (Industrial Ventilation Survey Face Velocity Method)
- complete AF Forms 2751 (Bulk Material Sampling Data)
- collect breathing zone or personal air samples
- collect air samples from industrial environment
- complete AF Forms 2758 (Industrial Hygiene Survey Data Sheet)
- collect data on equipment, aircraft, or other operations which produce noise

A majority of these personnel hold DAFSCs 90730 and 90750 (19 percent and 75 percent, respectively). Their average grade is E-3, with an average of 23 months in service. They perform an average of only 43 tasks.

III. WATER AND POLLUTION PERSONNEL CLUSTER (GRP071, N=26). The members of this cluster are responsible for monitoring water and pollution, which involves collecting and analyzing various samples and preparing required reports. A majority (81 percent) of these personnel are in their first enlistment and perform an average of 35 tasks. Forty-seven percent of their job time is spent performing water and pollution functions. Common tasks include:

- perform bacteriological analyses of water by membrane filter technique
- collect waste water samples for analyses
- perform pH determinations
- preserve water samples for chemical analysis
- perform bulk water sample collection
- complete AF Forms 2752 (Environmental Sampling Data)
- perform chlorine determinations
- perform tests to determine fluoride levels in water
- perform bacteriological analysis of water for fecal coliform
- record results of chemical analysis of water
- complete AF Forms 708 (Swimming Pool Operational Log)
- monitor ground water contamination other than bacteriological

Seventy-seven percent of these Water and Pollution Monitors hold DAFSC 90750. The average grade of these airmen is E-3. This cluster consists of two job types which are discussed below.

A. Assistant Water and Pollution Monitors (GRP170, N=6). These six airmen perform functions involving Water and Pollution monitoring. They make up a rather inexperienced group, having only 16 months of military service. Although these members work as pollution monitors, they perform more routine tasks than the other group discussed within this cluster. Common tasks include:

- collect potable water samples for analyses
- collect ice samples for bacteriological analyses
- perform bacteriological analyses of water by membrane filter technique
- perform illumination surveys
- perform industrial ventilation surveys
- complete AF Forms 2757 (Illumination Survey Data Sheet)
- drive military motor vehicles

perform noise surveys  
complete DD Forms 2214 (Noise Survey)

B. Water and Pollution Monitors (GRP235, N=9). This small group of respondents is primarily responsible for performing the full scope of functions related to monitoring water and pollution. Fifty-five percent of their job time is spent on the duty of monitoring water pollution. Commonly performed functions include collecting, analyzing, and reporting the results of water and pollution. Eighty-nine percent of these members are in their first enlistment, with an average grade of E-3. They perform an average of 35 tasks. Common tasks include:

perform pH determinations  
preserve water samples for chemical analysis  
ship water samples for chemical or radiological analyses  
complete AF Forms 2752 (Environmental Sampling Data)  
perform bacteriological analyses of water by membrane  
filter technique  
perform chlorine determinations  
perform tests to determine fluoride levels in water  
collect potable water samples for analyses  
perform bulk water sample collection  
participate in meetings, such as staff meetings, briefings  
conferences, or workshops  
drive military motor vehicles  
record results of chemical analysis of water  
complete FD Forms 2536 (Microwave Oven Field Test Record)  
complete AF Forms 708 (Swimming Pool Operational Log)  
monitor ground water contamination other than  
bacteriological  
examine disinfection of new and repaired water distribution  
lines

IV. TECHNICAL TRAINING INSTRUCTORS INDEPENDENT JOB TYPE (GRP232, N=9). This group contains personnel from both the 907X0 and 908X0 career ladders who are primarily responsible for conducting classroom instruction. Fifty-five percent of their job time is spent on training duties, while 43 percent of the remaining job time is spent on other supervisory duties. These members perform an average of 47 tasks. Representative tasks include:

conduct resident course classroom training  
prepare lesson plans  
develop training aids  
write test questions  
schedule training sessions  
administer tests  
evaluate training progress of students

- develop resident course or career development course (CDC) curriculum materials
- assign resident course instructors
- procure training aids, space, or equipment
- research technical publications
- determine resident course training requirements
- establish work schedules
- participate in meetings, such as staff meetings, briefings, conferences, or workshops
- evaluate training methods or techniques

These respondents hold an average grade of E-6, with an average of 12 years in service. Sixty-seven percent of these instructors hold DAFSC 90770, 11 percent hold DAFSC 90750, and the remaining 22 percent hold DAFSC 90870. Eighty-eight percent of these personnel are assigned to ATC and 12 percent are assigned to HQ USAF.

V. GENERAL MANAGERS AND SUPERINTENDENTS CLUSTER (GRP082, N=35). This group of managers and superintendents is primarily responsible for the overall management functions. Ninety-one percent of their relative job time was spent on five management supervisory related duties; organizing and planning, directing and implementing, inspecting and evaluating, training, and general administrative procedures. Approximately 50 percent of these members hold DAFSC 907X0 (90770 - 31 percent, 90790 - 11 percent, and 90700 - 6 percent) and approximately 50 percent hold DAFSC 908X0 (90850 - 3 percent, 90870 - 31 percent, 90890 - 11 percent, and 90300 - 6 percent). These managers perform an average of 68 tasks. Common tasks include:

- participate in meetings, such as staff meetings, briefings, conferences, or workshops
- determine work priorities
- direct industrial hygiene surveillance or workplaces
- evaluate requests for issue of hazardous materials
- drive military motor vehicles
- interpret results of air sample analyses and make recommendations
- interpret PEL values and notations
- establish organizational policies, office instructions (OI), or standing operating procedures (SOP)
- prepare APR
- interpret policies, directives, or procedures for subordinates
- direct industrial ventilation surveillance programs
- establish work schedules
- coordinate with environmental medicine personnel
- complete AF Forms 2754 (Chronological Record of Workplace Surveillance)
- develop work methods or procedures

These incumbents have an average grade of E-7, with an average of more than 18 years military service, and supervise an average of 4 subordinates.

VI. ENVIRONMENTAL MEDICINE SUPERVISORS AND NCOICs CLUSTER (GRP159, N=136). This cluster represents 11 percent of the survey sample. Ninety-nine percent hold AFSC 908X0. These personnel perform supervisory-administrative duties and devote almost two-thirds of their relative job time doing so. These supervisors perform the third highest average number of tasks (77) of all groups reported. Some tasks representative of these respondents include:

- participate in meetings, such as staff meetings, briefings, conferences, or workshops
- establish organizational policies, office instructions (OI), or standing operating procedures (SOP)
- collect and assemble information for Part II (Environmental Medicine Section) of the aerospace medicine report
- prepare APR
- determine work priorities
- counsel personnel on personal or military-related matters
- drive military motor vehicles
- interpret policies, directives, or procedures for subordinates
- orient newly assigned personnel
- establish work schedules
- direct Tuberculosis detection and control programs
- prepare AF Forms 977 (Facility Inspection Form)
- prepare work assignments
- supervise Environmental Medicine Specialist (AFSC 90850)
- develop work methods or procedures

These incumbents have an average grade of E-6, with an average of 14 years in service, while over 64 percent hold 7-skill level. Personnel within this cluster supervise an average of four subordinates. Job satisfaction indicators and reenlistment intentions for these respondents are relatively high. Three distinct supervisory job types identified within this cluster are discussed below.

A. Environmental Medicine Superintendents and Foremen Job Type (GRP282, N=31). This small group of superintendents and foremen are primarily responsible for performing high level management functions. Approximately 75 percent of these members' relative job time is spent on management and administrative functions. These functions consist of directing and implementing, organizing and planning, inspecting and evaluating, training, and general administrative procedures. With an average grade of E-7, these superintendents and foremen perform an average of 122 tasks. Examples of those tasks follows:

- participate in meetings, such as staff meetings, briefings, conferences, or workshops
- establish organizational policies, office instructions (OI), or standing operating procedures (SOP)
- research or edit inputs for recurring reports
- perform self-inspections
- assign personnel to duty positions
- schedule temporary duty, leaves, or passes
- drive military motor vehicles
- prepare recommendations for awards or decorations
- determine work priorities
- evaluate inspection reports or procedures
- counsel personnel on personal or military-related matters
- implement self-inspection programs

This is a well experienced group of incumbents with an average of 17.5 years of military service. Ninety-one percent of these members hold 7-skill levels or higher.

B. Subsistence Inspectors/Supervisors (GRP328, N=44). These personnel perform a combination of supervisory and subsistence inspection functions. They perform the highest average number of tasks (288) of all groups reported. Common tasks include:

- evaluate inspection reports or procedures
- perform medical evaluations of on-base food serving and preparation facilities
- establish work schedules
- assign personnel to duty positions
- implement self-inspection programs
- prepare AF Forms 977 (Facility Inspection Form)
- prepare written reports on inspection of base food serving facilities
- evaluate military or environmental medicine reports
- perform self-inspections
- direct Tuberculosis detection and control programs
- perform analyses or summaries of data trends or statistics
- perform medical evaluation of on-base food storage facilities

C. Epidemiological Support NCOICs Subcluster (GRP172, N=61). These personnel are responsible for managing the epidemiological support functions of their units, organizations, or community. While they

perform some routine supervisory and management functions, their specialized functions are related to epidemiological support functions. They perform an average of 125 tasks. Common tasks include:

- participate in meetings, such as staff meetings, briefings, conferences, or workshops
- direct Tuberculosis detection and control programs
- conduct Tuberculosis detection interviews
- monitor sexually transmitted disease case treatment and follow-up
- conduct hearing protection training
- conduct sexually transmitted disease (STD) control interviews
- establish organizational policies, office instructions (OI), or standing operating procedures (SOP)
- collect and assemble information for Part II (Environmental Medicine Section) of the aerospace medicine report
- coordinate venereal disease control programs with medical or public health personnel
- locate and interview sexually transmitted disease, Tuberculosis, and communicable disease contacts
- evaluate communicable disease trends or statistics
- report civilian sexually transmitted disease contacts to public health authorities
- conduct communicable disease control interviews other than Tuberculosis or sexually transmitted diseases
- monitor INH patient treatment programs
- coordinate Tuberculosis detection and control programs with medical or public health personnel

These personnel have an average grade of E-5 and 61 percent hold DAFSC 90870. Two percent of the members of this group hold DAFSC 90770, 7 percent hold DAFSC 90850, 86 percent hold DAFSC 90870, and 2 percent hold DAFSC 90890. They have an average of 17 years in service.

VII. FACILITY AND FOOD INSPECTORS AND EVALUATORS CLUSTER (GRPO98, N=81). This group of inspectors and evaluators comprise six percent of the survey sample. They are responsible for facility and food inspecting and evaluating. Sanitary surveying consumes a large portion (43 percent) of these members' job time. They perform an average of 63 tasks. Common tasks include:

- prepare AF Forms 977 (Facility Inspection Form)
- perform medical evaluations of on-base food serving and preparation facilities
- perform medical evaluations on on-base child care centers
- perform medical evaluations of on-base barber and beauty facilities

- perform medical evaluations of other on-base places of public assemblage, such as theaters or bowling alleys
- conduct surveillance checks of food handlers' health certificates
- perform tests to indicate sanitary condition of utensils or equipment
- perform medical evaluations of base vending machines or vending machine locations
- evaluate dishwashing methods or procedures
- perform finger plate cultures of food handlers
- perform medical evaluations of on-base food processing facilities
- evaluate contract food service self-inspection systems
- collect soft serve ice cream or yogurt samples

With an average of 69 months in military service, these members hold an average grade of E-4. Fifty-one percent of these respondents are in their first enlistment. Three distinct job groups were identified within this cluster, and are discussed below.

A. Medical Evaluators Subcluster (GRP204, N=23). This small group of airmen are primarily responsible for medical inspections and evaluations. A majority (57 percent) of these evaluators' job time is spread over 5 supervisory and administrative duties, with 29 percent being spent on sanitary surveying, which is inherent in the job of medical evaluator. They perform an average of 97 tasks. Common tasks include:

- prepare medical evaluations of on-base food serving and preparation facilities
- prepare AF Forms 977 (Facility Inspection Form)
- direct inspections of food service or food storage facilities
- prepare recommendations for sanitary practices or procedures
- perform medical evaluations on on-base child care centers
- drive military motor vehicles
- prepare written reports on inspection of base food serving facilities
- perform medical evaluations of on-base barber and beauty facilities
- perform medical evaluation of on-base food storage facilities
- participate in meetings, such as staff meetings, briefings, conferences, or workshops
- prepare APR
- evaluate dishwashing methods or procedures

Sixty-five percent of these members hold DAFSC 90870. They have an average grade of E-5, with an average of over 12 years of service, and 9 percent are in their first enlistment.

B. Food Inspectors Subcluster (GRP221, N=8). This small subcluster of individuals, while performing some of the routine functions related to supervisory and administrative duties, are primarily food inspectors. Fifty percent of these airmen were in their first enlistment and perform a great number of sanitary support functions. They perform an average of 108 tasks. Common tasks include:

- prepare AF Forms 977 (Facility Inspection Form)
- perform medical evaluations of on-base food serving and preparation facilities
- issue food handler training certificates
- perform medical evaluation of on-base food storage facilities
- perform medical evaluation of on-base barber and beauty facilities
- develop inspection schedules
- perform tests to indicate sanitary condition of utensils or equipment
- drive military motor vehicles
- evaluate dishwashing methods or procedures
- participate in meetings, such as staff meetings, briefings, conferences, or workshops
- inspect damaged subsistence items
- maintain duplicate food handlers' training card files
- prepare written reports on inspection of base food serving facilities
- prepare recommendations for sanitary practices or procedures
- conduct surveillance checks of food handlers' health

These respondents have an average grade of E-4, with an average of 61 months TAFMS.

C. Food Facility Inspectors Subcluster (GRP144, N=44). This subcluster of respondents is responsible for facility inspecting and evaluating. Duties involve the inspection of various facilities ranging from barber and beauty shops to storage facility. They are a fairly inexperienced group of airmen, with an average grade of E-3, and 73 percent are in their first enlistment. They perform an average of only 38 tasks. Common tasks include:

- prepare AF Forms 977 (Facility Inspection Form)
- perform medical evaluations of on-base food serving and preparation facilities
- perform medical evaluations on on-base child care centers

- perform medical evaluations of other on-base places of public assemblage, such as theaters or bowling alleys
- conduct surveillance checks of food handlers' health certificates
- perform medical evaluation of on-base food storage facilities
- issue food handler training certificates
- prepare written reports on inspection of base food serving facilities
- maintain duplicate food handlers' training card files
- perform medical evaluations of base vending machines or vending machine locations
- prepare recommendations for sanitary practices or procedures
- perform tests to indicate sanitary condition of utensils or equipment
- drive military motor vehicles
- prepare recommendations for proper practices or procedures for handling or storing perishable foods
- perform finger plate cultures of food handlers
- perform medical evaluations of on-base food processing facilities

VIII. EPIDEMIOLOGICAL SUPPORT PERSONNEL CLUSTER (GRP051, N=111). These 111 members comprise approximately 9 percent of the survey sample. They have the general responsibility for monitoring the adequacy of programs and services designed to treat and control the spread of various diseases, and to evaluate the suitability of overall sanitary conditions. While these personnel spend small portions of their job time on general functions, they are involved primarily with tasks related to Epidemiological support functions and spend 32 percent of their job time performing tasks related to that duty. They perform an average of 51 tasks. Common tasks include:

- monitor INH patient treatment programs
- conduct Tuberculosis detection interviews
- maintain individual Tuberculosis control program records
- monitor sexually transmitted disease case treatment and follow-up
- conduct sexually transmitted disease (STD) control interviews
- report civilian sexually transmitted disease contacts to public health authorities
- locate and interview sexually transmitted disease, Tuberculosis, and communicable disease contacts
- initiate AF Forms 2453 (Tuberculosis Detection and Control (Data))
- notify gaining MFT regarding patients on INH who are departing PCS
- complete state and federal forms for communicable diseases

- coordinate Tuberculosis detection and control programs with medical or public health personnel
- coordinate venereal disease control programs with medical or public health personnel
- conduct hearing protection training
- drive military motor vehicles
- conduct communicable disease control interviews other than Tuberculosis or sexually transmitted diseases

This cluster consists of relatively inexperienced personnel, having an average grade of E-3, 29 months in the career field, 34 months in the military service, and 80 percent are in their first enlistment. Within this cluster, five job types were identified and are described below.

A. Community Health Support Personnel (GRP261, N=8). This small group of airmen are responsible for monitoring community diseases. Over half of these members are assigned to CONUS. Seventy-five percent of these personnel hold DAFSC 90870. These airmen have an average grade of E-3, with an average of 43 months in service. They perform an average of 51 tasks. Common tasks include:

- maintain individual Tuberculosis control program records
- initiate AF Forms 2453 (Tuberculosis Detection and Control Data)
- monitor INH patient treatment programs
- conduct Tuberculosis detection interviews
- prepare AF Forms 977 (Facility Inspection Form)
- monitor sexually transmitted disease case treatment and follow-up
- perform medical evaluations of on-base food serving and preparation facilities
- prepare written reports on inspection of base food serving facilities
- conduct sexually transmitted disease (STD) control interviews
- notify gaining MFT regarding patients on INH who are departing PCS
- locate and interview sexually transmitted disease, Tuberculosis, and communicable disease contacts
- prepare recommendations for proper practices or procedures for handling or storing perishable foods
- perform pregnant worker evaluations
- drive military motor vehicles
- prepare recommendations for sanitary practices or procedures

Job satisfaction indicators for these personnel were relatively high for all indicators with the exception of job interest. Only 50 percent indicated their jobs were interesting.

B. Sanitation Evaluators (GRP248, N=18). This small group of respondents is responsible for monitoring sanitary conditions and conducting training to achieve adequate standards as required by regulation. These members have an average grade of E-3, and 83 percent are in their first enlistment. They perform an average of 74 tasks. Common tasks include:

- issue food handler training certificates
- conduct surveillance checks of food handlers' health certificates
- monitor sexually transmitted disease case treatment and follow-up
- conduct food handling and personal hygiene training for food service personnel
- monitor INH patient treatment programs
- maintain individual Tuberculosis control program records
- perform medical evaluations of other on-base places of public assemblage, such as theaters or bowling alleys
- conduct Tuberculosis detection interviews
- perform medical evaluations on on-base child care centers
- perform medical evaluations of on-base barber and beauty facilities
- conduct sexually transmitted disease (STD) control interviews
- perform medical evaluations of on-base food serving and preparation facilities
- perform medical evaluations of base vending machines or vending machine locations
- prepare AF Forms 977 (Facility Inspection Form)
- maintain duplicate food handlers' training card files
- conduct hearing protection training
- initiate AF Forms 2453 (Tuberculosis Detection and Control Data)
- perform finger plate cultures of food handlers

C. Communicable Disease Control Monitors (GRP256, N=30). These respondents are responsible for monitoring the communicable disease programs and services. In contrast to the Community Health Support group described above, these members perform more of the detailed functions relative to monitoring communicable diseases. This group is also slightly more senior, having an average grade of E-4 with an average of 40 months in service. They perform a limited job, averaging only 33 tasks. Common tasks include:

- maintain individual Tuberculosis control program records
- conduct sexually transmitted disease (STD) control interviews
- monitor sexually transmitted disease case treatment and follow-up
- conduct Tuberculosis detection interviews

report civilian sexually transmitted disease contacts to  
public health authorities  
monitor INH patient treatment programs  
locate and interview sexually transmitted disease,  
Tuberculosis, and communicable disease contacts  
complete state and federal forms for communicable diseases  
coordinate venereal disease control programs with medical  
or public health personnel  
coordinate Tuberculosis detection and control programs  
with medical or public health personnel  
investigate communicable disease cases other than  
Tuberculosis or sexually transmitted disease  
notify gaining MFT regarding patients on INH who are  
departing PCS  
conduct communicable disease control interviews other than  
Tuberculosis or sexually transmitted diseases  
initiate AF Forms 2453 (Tuberculosis Detection and Control  
Data)  
maintain appointment logs

D. Environmental Statistics and Followup Personnel (GRP247, N=30).

This small group of respondents is responsible for maintaining statistics and follow-up on communicable disease treatment control facilities. This group comprises fairly inexperienced members having an average grade of E-3, 27 months in service, and 90 percent are in their first enlistment. They perform an average of 53 tasks. Common tasks include:

monitor sexually transmitted disease case treatment and  
follow-up  
report civilian sexually transmitted disease contacts to  
public health authorities  
initiate AF Forms 2453 (Tuberculosis Detection and Control  
Data)  
locate and interview sexually transmitted disease,  
Tuberculosis, and communicable disease contacts  
complete state and federal forms for communicable diseases  
maintain biostatistics on communicable diseases  
construct and maintain tab "F" of industrial case files  
fit respiratory protective devices  
prepare biostatistical reports on communicable diseases  
coordinate with bioenvironmental engineering personnel  
perform pregnant worker evaluations  
complete AF Forms 2767 (Occupational Illness/Injury Report)  
investigate communicable disease cases other than  
Tuberculosis or sexually transmitted disease  
monitor occupational health examination programs  
review medical records for occupational diseases

IX. ENVIRONMENTAL MEDICINE CURRENCY TRAINING PERSONNEL CLUSTER (GRP146, N=18). This group of 18 incumbents works as currency trainers, which involves a variety of training (Health and Safety training, heart protection, etc.) and Environmental Medical Procedures. They also perform other general Environmental Medicine functions. They perform an average of 53 tasks. Common tasks include:

- fit respiratory protective devices
- conduct hearing protection training
- conduct respiratory protection training
- complete AF Forms 2767 (Occupational Health Training and Protective Equipment Fit Testing)
- monitor respiratory protection program
- conduct occupational health and safety training
- advise shop supervisors in ordering respiratory protection devices
- monitor occupational health examination programs
- monitor the proper use of personal protective devices
- perform fit testing of hearing protection devices for personnel
- direct respiratory protection programs
- research textbooks, manuals, or other publications to identify characteristics of contaminants
- review occupational health examination results
- conduct proper use of designated personal protection equipment training
- recommend personal protective devices

These personnel have an average grade of E-4, with an average of 39 months in the career field.

X. SUBSISTENCE INSPECTORS CLUSTER (GRP165, N=224). This large group comprises 18 percent of the total sample. Sixty percent of their job time is spent on performing subsistence inspections. Members perform an average of 110 tasks. Common tasks include:

- inspect damaged subsistence items
- perform organoleptic examinations
- perform class 4 inspections of dairy products
- inspect subsistence items to be offered for reduced price sales in commissaries
- perform class 4 inspections of eggs
- perform class 8 inspections of miscellaneous subsistence products
- inspect sanitary conditions of containers or vehicles used for shipment of subsistence items
- perform class 4 inspections of meat

- perform closed can inspections
- test weight subsistence items
- perform class 4 inspections of miscellaneous subsistence products
- perform class 4 inspections of fruits or vegetables
- perform class 9 inspections of miscellaneous subsistence products
- perform class 8 inspections of fruits or vegetables
- conduct Hobart fat analysis on class 4, 5, 7, 8, and 9 ground meat times

With an average grade of E-4, these respondents average 54 months in the career field.

XI. ANIMAL CARE AND LABORATORY PERSONNEL CLUSTER (GRP134, N=24). This small group of airmen is involved with the care, treatment, and research of animals. Eighty percent of their job time is spent on duties related to animal care, performing laboratory animal medical care (52 percent) and supporting animal research programs. Twenty-nine percent of these personnel are in their first enlistment. They perform an average of 123 tasks. Common tasks include:

- restrain animals by physical methods
- weigh animals
- perform health checks on laboratory animals
- restrain animals by chemical methods
- collect blood samples
- calculate drug dosages
- euthanize animals
- maintain individual laboratory animal records
- apply identification markings to laboratory animals
- feed or water laboratory animals
- administer anesthetics by intramuscular method
- prepare daily or weekly animal inventory forms
- administer oral medications
- prepare daily health check forms on laboratory animals

These personnel have an average grade of E-5, with an average of 10 years in the military service. Job satisfaction indicators for these personnel are generally high, with the exception of intentions to reenlist, only 42 percent indicated they would reenlist. Within this cluster, two job types were identified and are discussed below.

A. Laboratory Animal Research Support Personnel (GRP257, N=5). These respondents are responsible for supporting the animal research program. They typically calculate drug dosages, administer anesthetics by intramuscular methods, weigh animals, and perform health checks on laboratory animals. Forty-nine percent of these respondents' job time is spent on animal duties. They perform an average of 188 tasks. Common tasks include:

- monitor animal use and care conditions
- maintain records of identification systems for laboratory animals
- feed or water laboratory animals
- assign animals to holding facilities or research investigators
- confer with commercial drug or equipment salesmen
- restrain animals by physical methods
- participate in meetings, such as staff meetings, briefings, conferences, or workshops
- restrain animals by chemical methods
- evaluate conditions for transportation of research animals
- load or off-load research animals
- perform health checks on laboratory animals
- euthanize animals
- calculate drug dosages
- perform TB testing of animals

All of these members hold the 7-skill level, and have an average of 14 years in service. Sixty percent of these members indicate their talents are well utilized, 40 percent indicate their training is well utilized, and only 20 percent intend to reenlist (60 percent will retire).

B. Laboratory Animal Medical Care Personnel (GRP201, N=19). These airmen typically work in the base Veterinary offices or laboratories and are responsible for performing animal medical care on pets. They administer injections or immunizations by subcutaneous methods, prepare fecal samples for examination, and maintain cleanliness of facilities. Many of the tasks performed by these incumbents are the same as those performed by animal research personnel. They perform an average of 106 tasks. Common tasks include:

- weigh animals
- apply identification markings to laboratory animals
- collect blood samples
- restrain animals by physical methods
- perform health checks on laboratory animals
- restrain animals by chemical methods
- maintain individual laboratory animal records
- administer anesthetics by intramuscular method
- calculate drug dosages
- administer anesthetics by intravenous method
- administer oral medications
- prepare daily health check forms on laboratory animals
- prepare daily or weekly animal inventory forms
- administer injections or immunizations by intramuscular method
- euthanize animals

With an average grade of E-5, these respondents average 8 years in the military service. Job satisfaction indicators are generally positive for these animal care personnel, however, only 47 percent indicate they will reenlist.

#### Comparison of Specialty Jobs

Selected background information, percent time spent on duties, and job satisfaction data for clusters, subclusters, and independent job types identified in this survey are displayed in Tables 4, 5, and 6. Additionally, more complete task lists related to each job group are presented in tables listed in Appendix A.

Generally, Bioenvironmental Engineering, AFSC 907X0, and Environmental Medicine, AFSC 908X0, perform distinct jobs, with some overlap in training and management functions, subsistence inspections, epidemiological support functions, and communicable disease control. With the exception of training and management functions, the overlap for the aforementioned jobs is very small (1-3 percent). Other than the overlap mentioned above, 907X0 personnel perform tasks within duties specifically related to their career ladder (General Administrative Procedures, Monitoring Water and Pollution, Conducting Occupational Health Programs, and Conducting Radiological Health Programs), while 908X0 personnel perform tasks specifically related to their career ladder (General Administrative Procedures, Subsistence Inspections, Sanitary Surveys, and Conducting Occupational Health Programs).

Job satisfaction among both AFSC 907X0 and AFSC 908X0 personnel is generally high (see Table 6). The majority of survey respondents find their jobs interesting and feel they are making good use of their training and talents. Reenlistment intentions among both career ladder personnel are also good, with a clear majority indicating their intent to reenlist.

The results of the JOB STRUCTURE ANALYSIS clearly indicate that members of the 907X0 career field as a whole, perform a highly homogeneous job that covers the total spectrum of Bioenvironmental Engineering functions. The interrelation of the jobs performed supports the existence of the present single classification structure.

The present 908X0 classification structure is also supported by the survey data with homogeneous job performance. Changes in the basic jobs performed by these personnel resulted when some functions were deleted and new functions transferred to become their responsibility. There is little technical overlap between the career ladders.

## DAFSC GROUP ANALYSIS

In addition to examining the job structure of the Bioenvironmental Engineering (907X0) and Environmental Medicine (908X0) specialties (as discussed in the CAREER LADDER STRUCTURE section), this report also includes an analysis of the tasks incumbents perform at each skill level within each specialty. By grouping cases into the various DAFSC skill level groups, a picture develops of the similarities and differences between these groups. These data can then be used to evaluate whether personnel are being utilized in the manner specified by current specialty descriptions (AFR 39-1) and can serve as one basis for considering changes to current utilization policies or training programs.

The information in Table 7 illustrates the relative job emphasis for each of the specialties in terms of average time devoted to various duties. AFSC 907X0 incumbents spend the largest amounts of their job time concentrating on occupational health programs, general administrative activities, and water and pollution activities. In contrast, the 908X0 incumbents spend most of their job time concentrating on subsistence inspections, sanitary surveys, and epidemiological support activities. There is very little similarity between the two specialties in terms of relative time spent on duties, other than supervisory duties which are similar to both fields. The distribution of skill levels across job groups is displayed in Table 8.

### DAFSC 907X0 Bioenvironmental Engineering

Personnel with a duty AFSC of 907X0 account for approximately 47 percent of the total sample. A more detailed discussion of the skill levels within the 907X0 career ladder is presented below.

DAFSC 90730. The 3-skill level personnel represent 10 percent (61 members) of the 907X0 incumbents in the survey and perform an average of 74 tasks. These members spend 86 percent of their job time on technical and administrative duties with a majority reporting they spend slightly more than one-half of their job time performing tasks related to conducting radiological health programs, conducting occupational health programs, and monitoring water and pollution (see Table 9). Eighty-two percent of the 3-skill level individuals are in the Health Protection cluster (see Table 8). Examples of tasks performed by these members include:

- collect potable water samples for analysis
- perform noise surveys
- complete DD Form 2214 (Noise Survey)
- perform illumination survey
- perform industrial ventilation surveys
- perform pH determinations
- perform chlorine determination
- collect air samples from industrial environments

collect data equipment, aircraft or other  
operations which produce noise  
collect breathing zone or personnel air samples

Table 10 lists additional tasks performed by this group to further illustrate the kinds of tasks performed by the majority of 3-skill level personnel.

DAFSC 90750. The members (18 percent of the 907X0 personnel in the survey sample) of the 5-skill level group perform a slightly broader job than indicated by the 3-skill level respondents, with 77 percent of their duty time devoted to administrative and technically oriented tasks. Table 11 presents examples of tasks performed by these members. Note that many of the tasks performed are the same for the 3-skill level group. Members of this skill level group perform an average of 84 tasks, and spend approximately one-half of their job time conducting radiological and occupational health programs, and monitoring water and pollution data. Some 5-skill level personnel take on slightly more supervisory functions. Seventy-five percent of these personnel are in the Health Protection cluster (Table 8). Tasks which differentiate between 3- and 5-skill level groups are related to supervision and require slightly more technical ability (see Table 12).

DAFSC 90770. Seven-skill level personnel represent 31 percent (183 members) of the AFS 907X0 personnel in the survey sample. They perform an average of 73 tasks. Although they spend some time (28 percent) on the technical aspects of the job, they are involved primarily with supervisory tasks, as 72 percent of their job time is spent on supervisory and administrative functions. Table 13 presents examples of tasks performed by these personnel which indicate the range of the job, with 75 percent of the group performing tasks such as preparing APRs, determining work priorities, and constructing and maintaining industrial case files. Thus, the 7-skill level job is primarily supervisory. Fifty percent of these members are in the Bioenvironmental Engineering Supervisors cluster.

Differences between 5- and 7-skill level personnel are reflected by the listing of tasks in Table 13A. As would be expected, the task differences are the result of increased supervisory and management functions required of the 7-skill level personnel.

DAFSC 90790 and CEM Code 90700. Due to the similarity of tasks performed and percent time spent on duties, these two skill levels are difficult to distinguish and are, therefore, described together. Respondents at these levels spend a majority of their job time performing management, supervisory, and staff level functions. Approximately 70 percent of their job time is spent on supervisory and management-related tasks. Although 7-skill level personnel perform some of the same tasks, the differences are in the level of performance as these members are high level managers and superintendents, and are often supervisors of 7-skill level personnel. Table 14 presents tasks commonly performed by these 90790 and CEM Code 90700 personnel. As previously mentioned, they are involved with mainly management functions. Table 15 provides those tasks which distinguish between these personnel and 7-skill level personnel.

### DAFSC 908XO Environmental Medicine

Personnel with a duty AFSC of 908XO account for approximately 53 percent of the survey sample. This analysis will include a discussion of the duties and tasks common to skill level groups, as well as those which best differentiate 3-, 5-, 7-, and 9-skill levels and CEM Code 908XO groups. A more detailed discussion of skill level groups follow.

DAFSC 90830. These 3-skill level respondents represent 16 percent (140 members) of the 908XO incumbents in the survey sample. In general, the job performed by these personnel involves subsistence inspections, sanitation surveys, and epidemiological support procedures. Those 3 duties consume 63 percent of these members' job time (see Table 16). Tasks commonly performed by these members include:

- perform medical evaluation of on-base food serving and preparation facilities
- monitor INH patient treatment program
- issue food handlers training certificates
- safeguard food inspection stamps
- maintain individual TB control program records
- perform medical evaluations of on-base child care centers
- inspect damaged subsistence items
- conduct hearing protection training

For a more extensive list of tasks performed, see Table 17 which illustrates the jobs of 90830 incumbents.

DAFSC 90850. Members of the 5-skill level group represent 20 percent (176 members) of the 908XO incumbents who responded to the survey sample. These members spend a majority of their job time on the same three duties as the 3-skill level personnel which involve subsistence inspections, sanitation surveys, and epidemiological support procedures (see Table 16). These 3 duties consume 51 percent of these individuals' job time. Three- and 5-skill level respondents perform similar jobs. The small difference which exists between these groups is the result of 5-skill level personnel performing slightly more supervisory functions than 3-skill level personnel (see Table 18). Examples of common tasks performed by these respondents are provided in Table 17A.

DAFSC 90870. Seven-skill level personnel spend 51 percent of their job time performing supervisory duties; however, these incumbents still spend 42 percent of their total job time performing subsistence inspections, general administrative, sanitation surveys, and epidemiological support procedures which indicates a job that is a mix of supervisory and technical functions. Table 19 reveals the most common tasks performed by 90870 personnel. Tasks primarily involve supervision or some aspect of subsistence inspection, such as determining work priorities, developing work methods or procedures, safeguarding food stamps, and performing organoleptic examinations.

A5 DEVELOP BUDGET OR FINANCIAL REQUIREMENTS	8	54	-46
B95 IMPLEMENT SELF-INSPECTION PROGRAMS	15	61	-45
B102 ORIENT NEWLY ASSIGNED PERSONNEL	32	78	-45

The greatest differences between the two skill level groups occur in both the supervision and subsistence inspection duties. DAFSC 90830 and 90850 personnel spend a very small amount of their job time performing supervisory duties compared to 42 percent for 7-skill level incumbents. Task differences were also noted between DAFSC 90850 and 90870 incumbent (see Table 20). Supervisory tasks, such as preparing APRs or scheduling leaves or passes, are performed by a larger percentage of 90870 incumbents.

DAFSC 90890 and CEM Code 90800. DAFSC 90890 (9 members) and CEM Code 90800 (4 members) personnel were combined due to the similarity of the tasks they perform and the small number of 90800 personnel. These personnel spend approximately 78 percent of their job time performing supervisory and management duties. Table 21 lists examples of tasks which are performed by the greatest percentages of 90890 and CEM personnel. As expected, these tasks are primarily management and supervisory in nature, such as preparing APRs, participating in staff meetings, and establishing organizational policies and procedures. Some examples of the technical tasks these incumbents perform include preparing written reports of inspection of base food serving facilities and acting as a technical advisor to procurement officers. A comparison of 90870 versus 90890 and CEM personnel reveals the greatest duty differences occur in the supervisory and management areas. Examples of tasks which best differentiate these skill levels are presented in Table 21A. Seven-skill level incumbents report spending 42 percent of their job time performing supervisory duties, while 90890 and CEM respondents spend 78 percent of their job time performing the management and supervisory duties.

#### Summary

In the analysis of skill level groups, subsistence inspection tasks are indicative of 90830 and 90850 personnel. Seven-skill level personnel also spend job time performing subsistence inspection tasks but, in addition, spend 42 percent of their job time performing supervisory duties. DAFSC 90890 and CEM personnel spend 78 percent of their job on supervisory and management functions, with the remainder being spent primarily on subsistence inspection, sanitation surveys, and general administrative procedures.

#### COMPARISON OF SURVEY DATA TO AFR 39-1 SPECIALTY DESCRIPTIONS

Survey data for the 907X0 and 908X0 career ladder were compared to the AFR 39-1 Specialty Descriptions, both of which were dated 30 April 1983. These descriptions are complete, well supported by survey data, and accurately portray the duties and responsibilities of Bioenvironmental Engineering and Environmental Medicine personnel. The descriptions are intended to give a broad overview of the duties and tasks required to be performed by the various skill level personnel.

F299 INSPECT DAMAGED SUBSISTENCE ITEMS	44	7	37
H426 COMPLETE STATE AND FEDERAL FORMS FOR COMMUNICABLE DISEASES	37	0	37
E242 COMPLETE DD FORMS 1232 (QUALITY ASSURANCE REPRESENTATIVE'S CORRESPONDENCE)	36	0	36
D204 PLAN OJT	51	14	36
D208 SCHEDULE TRAINING SESSIONS	43	7	36
F388 SAFEGUARD FOOD INSPECTION STAMPS	43	7	36
F318 PERFORM CLASS 4 INSPECTIONS OF FRUITS OR VEGETABLES	36	0	36

Overall, the 3-, 5-, 7-, and 9-skill level and CEM Code descriptions were found to provide a clear, concise overview of the major duties and tasks performed by 907X0 and 908X0 incumbents. No duties or responsibilities were omitted, nor were any trends identified during analysis of career ladder structure which indicated a need for any changes in either 907X0 or 908X0 Specialty Descriptions.

#### ANALYSIS OF EXPERIENCE (TAFMS) GROUPS

In addition to the analysis of tasks and jobs across skill level groups, it is also important to analyze jobs and tasks as they relate to experience in the career field. First-enlistment personnel are of particular interest in terms of training implications. Table 22 reflects the percent of time spent on duties by personnel in the various enlistment groups. Generally, first-enlistment personnel are working in all major jobs (see Figure 2). Table 23 provides job satisfaction data for these career ladders. A more detailed discussion of how first-enlistment personnel are working within these career fields and how these personnel perceive their jobs is presented below.

##### 907X0 First-Enlistment Personnel

As illustrated in Figure 3, first-enlistment personnel participate in a full range of activities related to 907X0 functions and are members of all of the technically-oriented jobs. Eighty-three percent of the 1-48 months personnel are performing Health Protection functions. Ten percent are working as water and pollution monitor personnel. As discussed in the SPECIALTY JOBS section of this report, and displayed in Figure 2, personnel in their first four years in the specialty perform tasks related to all major job clusters, with the majority working as Health Protection personnel.

Since the first-enlistment (1-48 months TAFMS) groups are the target population for initial skill training, the tasks they perform are most important. Table 24 provides tasks commonly performed by airmen with 1-48 months TAFMS. Common tasks performed by these airmen include: conducting occupational health programs, general administrative functions, monitoring water pollution, and general bioenvironmental engineering actions, such as perform noise surveys, complete AF Forms 2761 (Hazardous Materials Data), perform industrial ventilation surveys and collect samples.

##### 907X0 Job Satisfaction

In an attempt to provide managers of the 907X0 career ladder with a better understanding of the factors which affect the job performance of airmen, an analysis of job satisfaction which reflects the perceptions individuals hold about their jobs is provided. Table 23 presents the job satisfaction indicators for the current personnel, as well as for a comparative sample of all medical AFSCs surveyed in 1983.

TABLE 22

\* Comparative sample of medical career ladders surveyed in 1982 and 1983 included: 902X1, 918X0, 981X0, and 992X0 (N=1,307)

FIGURE 3  
DISTRIBUTION OF FIRST-ENLISTMENT 907X0 PERSONNEL  
ACROSS CAREER LADDER JOBS  
(PERCENT MEMBERS RESPONDING)

In general, job satisfaction indicators for 907X0 personnel are equal to, or higher than, the comparative sample. All job satisfaction indicators for the first-enlistment personnel are equal or higher than those of the comparative sample. In view of the responses presented on Table 23, Bioenvironmental Engineering personnel generally are satisfied with their jobs (job interest and perceived utilization of talents and training). However, reenlistment intentions for the first and second enlistment groups are slightly lower for the current enlistment group (62 percent versus 65 percent, respectively, for first-enlistment current and sample groups).

#### 908X0 First-Enlistment Personnel

To assess the pattern of change in jobs as a function of experience within the 908X0 career ladder, differences in tasks performed at various points of service were also analyzed. In the Environmental Medicine career ladder, no major deviations from the typical pattern of increasing time spent on supervisory tasks with increasing months TAFMS were noted (see Table 22). Junior airmen report spending greater percentages of their time on the more routine technical duties associated with the career ladder, such as subsistence inspections, administrative procedures, sanitation procedures, and epidemiological support.

As illustrated in Figure 4, first-enlistment personnel participate in a full range of activities related to 908X0 functions and are members of all the technically-oriented jobs. These first-enlistment personnel were examined based on tasks performed and various job satisfaction indices. Table 25 lists the most common tasks performed and reveals the diverse nature of their jobs. Most of the common tasks involve subsistence inspections, sanitation surveys and epidemiological support functions, such as preparing medical evaluations of on-base food service preparation facilities, monitoring INH patient treatment programs, maintaining individual TB control records, and conducting sexually transmitted diseases (STD) control.

#### 908X0 Job Satisfaction

The 908X0 first-enlistment respondents were also examined on job satisfaction indicators (see Table 23), which include job interest, perceived utilization of talents and training and reenlistment intentions. Similar to the 907X0 analysis, 908X0 job satisfaction data are compared to a first-enlistment sample of all medical career ladders surveyed in 1983. When compared to the medical sample group, a slightly lower percentage of 908X0 first-enlistment personnel perceived their jobs as interesting (75 percent for current versus 78 for the comparative group). All other indicators, however, were equal to or higher for members of the current group than the comparative group. Considering the responses provided in Table 23, Environmental Medicine personnel generally are satisfied with their jobs.

## TRAINING ANALYSIS

Occupational survey data provide information which can assist training managers in the development, validation, and modification of training programs relevant to the needs of personnel working in their first assignment within a career ladder. Factors which can be used to evaluate training are the percent of first-job (1-24 months TAFMS) or first-enlistment (1-48 months TAFMS) members performing tasks, along with training emphasis and task difficulty ratings (as discussed in the Task Factor Administration section). These factors were used to examine the Specialty Training Standards (STS) and the Plans of Instruction (POI) for Courses 3ABR90730, Bioenvironmental Engineering Specialist, and 3ABR90830, Environmental Medicine Specialist. Training personnel from the School of Aerospace Medicine at Brooks AFB, Texas, matched inventory tasks to appropriate sections of the 90730 POI dated July 1983, 90830 POI dated 12 June 1984, and 90830 POI (taught by Army at Brooke Army Medical Center, Fort Sam Houston, Texas) dated 5 November 1984; 907X0 STS dated 1 May 1984 and 908X0 STS dated November 1983. A complete computer listing displaying the percent members performing, training emphasis ratings, and task difficulty ratings for each task statement, along with POI and STS matchings, was forwarded to the technical schools for their use in review of training documents.

### Training Emphasis (907X0)

Training emphasis (TE) for each task in the inventory was assessed through ratings by 61 experienced Bioenvironmental Engineering NCOs. Data were processed to produce ordered listings of tasks in terms of recommended emphasis in training for first-term personnel. The average rating for all tasks included in the job inventory was 1.21, with a standard deviation of 1.84. Tasks receiving ratings of 3.05 or higher may be considered to have relatively high training emphasis. For a more complete description of these ratings, see the section on Task Factor Administration in the INTRODUCTION.

Examples of tasks rated highest in training emphasis are listed in Table 26 to show the types of tasks which have priority in training programs. As can be seen, tasks with the highest TE ratings are related to occupational health, water pollution, radiological health, and general administrative procedures. Overall, tasks in Table 26 with highest training emphasis are performed by 30 percent or more of the 907X0 first-job group (1-24 months), and the first-enlistment group (1-48 months), indicating resident technical training is generally appropriate.

### Task Difficulty (907X0)

The relative difficulty of each task in the inventory was assessed through ratings of 33 experienced 907X0 NCOs. These tasks were processed to produce an ordered listing of all tasks in terms of their relative difficulty. Ratings were standardized to have an average of 5.0 with a standard deviation equal to 1.

TABLE 26

EXAMPLES OF TASKS RATED HIGHEST IN TRAINING EMPHASIS (907X0)

TASKS	TNG EMP*	PERCENT MEMBERS PERFORMING	
		TST JOB	TST ENL

N712 CONSTRUCT AND MAINTAIN INDUSTRIAL CASE FILES EXCEPT TAB "F"	6.74	66	63
N719 IDENTIFY HAZARDOUS NOISE AREAS	6.74	81	79
N701 COLLECT CHEMICAL SAMPLES FROM INDUSTRIAL ENVIRONMENT	6.70	57	62
E232 COMPLETE AF FORMS 2764 (INDUSTRIAL VENTILATION SURVEY FACE VELOCITY METHOD)	6.69	81	79
E220 COMPLETE AF FORMS 2750 (INDUSTRIAL HYGIENE SAMPLING DATA)	6.59	87	85
E233 COMPLETE AF FORMS 2765 (INDUSTRIAL VENTILATION SURVEY PILOT TRAVERSE METHOD)	6.54	58	55
N726 INVESTIGATE POSSIBLE CHEMICAL HEALTH HAZARDS	6.52	55	57
E226 COMPLETE AF FORMS 2758 (INDUSTRIAL HYGIENE SURVEY DATA SHEET)	6.51	80	78
E231 COMPLETE AF FORMS 2763 (INDUSTRIAL HYGIENE VENTILATION PRESURVEY)	6.48	59	59
E224 COMPLETE AF FORMS 2756 (NOISE SURVEY (DOSIMETER))	6.44	84	80
L659 PERFORM BACTERIOLOGICAL ANALYSES OF WATER BY MEMBRANE FILTER TECHNIQUES	6.44	70	68
E229 COMPLETE AF FORMS 2761 (HAZARDOUS MATERIALS DATA)	6.41	82	82

\* Average TE = 1.21 High TE = 3.05 SD = 1.84

Those tasks listed in Table 27 and rated most difficult by 907X0 task difficulty (TD) raters are related to a variety of Bioenvironmental Engineering functions and involve management duties, radiological health, bioenvironmental support of aircraft and missile operations, and occupational health. These difficult tasks are performed by only a few first-term Bioenvironmental members. Most of these tasks are not performed by enough first-enlistment personnel to consider training in the initial skill training program. They are presented to show the range of tasks which are perceived to be difficult.

#### Training Emphasis (908X0)

Training emphasis (TE) for each task in the inventory was also assessed through ratings by 57 experienced Environmental Medicine NCOs. Data were also processed to produce ordered listings of tasks in terms of recommended emphasis in training for first-term enlisted personnel. The average rating for all tasks included in the job inventory was 1.56, with a standard deviation of 1.94. Tasks receiving ratings of 3.50 or higher may be considered to have relatively high training emphasis. For a more complete description of these ratings, see the section on Task Factor Administration in the INTRODUCTION.

Examples of tasks rated highest in training emphasis are listed in Table 28 to show the types of tasks which were recommended for priority in training programs. As can be seen, tasks with the highest TE ratings are related to subsistence inspections, sanitary surveys, epidemiological support and general administrative support procedures. Overall, tasks in Table 28, with the highest training emphasis are performed by 30 percent or more of the first-job group (1-24 months), and the first-enlistment group (1-48 months), again indicating basic resident technical training on these tasks is justified.

#### Task Difficulty (908X0)

The relative difficulty of each task in the inventory was also assessed through ratings of 57 experienced 908X0 NCOs. These tasks were processed to produce an ordered listing of all tasks in terms of their relative difficulty. Ratings were standardized to have an average of 5.0 with a standard deviation equal to 1.

Those tasks listed in Table 29 rated the most difficult by 908X0 task difficulty (TD) raters are related to a variety of Environmental Health functions and involve supervisory and management duties, performing laboratory and animal medical care, and supporting animal research. The management tasks listed in Table 29 are performed by only a few first-term Environmental Medicine personnel. Such managerial tasks are not performed by enough first-enlistment personnel to warrant training in initial skills training programs. They are displayed simply to illustrate the range of tasks which are perceived to be difficult.

### Specialty Training Standards (STS)

The 907X0 and 908X0 Specialty Training Standards were reviewed. Senior NCOs from each specialty matched job inventory tasks to specific paragraphs of the related STSs. These experienced senior NCOs were assigned to the School of Aerospace Medicine, Brooks AFB, TX. Each STS paragraph is analyzed to determine the adequacy of coverage by inventory tasks. Task difficulty (TD) and training emphasis (TE) data are available to assist in making various decisions about the adequacy of the STS. There is no pattern of great overlap identified between the two specialties involved in this study in the technical aspects of their job; therefore, the two STSs are distinct. As would be expected when analyzing two distinct STSs based on a common task list, there are a rather large number of unreferenced tasks.

Specialty Training Standard (907X0). A review of STS 907X0, dated 1 May 1984, was made comparing STS items to survey data. STS paragraphs containing general information or knowledge requirements were not evaluated. The 907X0 STS organizes career ladder duties into subdivision by specific activities.

Survey data support the present STS. Most paragraphs of the STS have tasks matched, the exception being paragraphs 8A-8E, Anatomy and Physiology. Although some subparagraphs were not matched, it was stated by career field NCOs that subparagraphs were so related to each other that to match tasks to every one would not prove useful. Training personnel should review subparagraphs.

There are 649 tasks not matched to the 907X0 STS. Many of these unreferenced tasks are related to the 908X0 career ladder and are not expected to match the Bioenvironmental Engineering 907X0 career field. Of the unreferenced tasks, only 25 are rated high in training emphasis. Of those 25 tasks, 22 are performed by 20 percent or more of the first-term members. A list of those tasks is presented in Table 30. A majority of those tasks are related to occupational health programs, water and pollution, and administrative procedures. Nonreferenced tasks performed by 20 percent or more first-enlistment airmen should be reviewed by training management personnel for possible coverage in the STS.

Specialty Training Standard (908X0). The STS for AFSC 908X0 dated November 1983 was reviewed to determine if it adequately supports the career ladder. Paragraphs containing general information and knowledge were not evaluated. Each paragraph of the STS was analyzed based on the survey data.

Survey data supports the present STS. Most paragraphs of the STS covering technical aspects have tasks matched, the exception is the paragraph which covers publication management. Training personnel should review paragraph 6 and all unmatched subparagraphs. There are 345 tasks not referenced to the 908X0 STS. Many of these nonreferenced tasks are related to the 907X0 career field and are not expected to match areas of the 908X0, Environmental Medicine, STS. Of the 345 unreferenced tasks, only 31 tasks are rated average or above in training emphasis, of which 11 had high TE ratings. Of these 11

\* Average TE = 1.21 High TE = 3.05 SD = 1.84

\*\*Average TD = 3 High TD = 6 SD = 1

tasks rated high in TE, 10 are performed by 20 percent or more of the first-enlistment members. A list of these tasks is provided in Table 31. A majority of these tasks are related to subsistence inspections, sanitation surveys, general administrative procedures, and occupational health. Nonreferenced tasks performed by 20 percent or more of the first-enlistment personnel should be reviewed by training personnel and a decision should be made as to whether these tasks should be covered by the STS.

#### Plan of Instruction (POI) 3ABY90730

This 6.5-week Bioenvironmental Engineering Course is a basic course intended to train personnel new to this career ladder. Course of instruction includes communication security, fundamentals of science, anatomy and physiology, drinking water, waste water management, solid waste management, environmental pollution, occupational health, atmospheric sampling, respiratory protection, ventilation, illumination, ionizing radiation, noise, and medical readiness.

The current plan of instruction for Course 3ABY90730 (dated 26 July 1982) was examined. Experienced personnel from the School of Aerospace Medicine, Brooks AFB TX, matched inventory tasks to criterion objectives (CO) of the course. Using task difficulty ratings, training emphasis ratings, and percent of first-enlistment performing information, an evaluation of the adequacy of the present course was made. The complete results of matching tasks to POI objectives are presented in a separate computer printout (FCPRT3) within the training extract. These matchings provide data which can be used as a basis for considering which items should be taught in the basic course, based on tasks performed by personnel during their first job (1-24 months TAFMS) and first enlistment (1-48 months TAFMS).

The occupational survey data basically supports all COs which had tasks matched to them. Only one CO did not have tasks identified as related to them (Anatomy and Physiology, paragraphs V through VC). Other unmatched objectives were breakouts of matched objectives and not being matched was a function of the extent of subdivision of the objectives.

Six hundred and forty-six tasks were not referenced to the POI. A majority of these tasks were related to the 908X0 career ladder, as tasks for both career ladders were included in a single inventory booklet. Some nonreferenced tasks related to the 907X0 career ladder are taught in an advanced course or OJT, and some are supervisory functions. Examples of nonreferenced tasks in descending order of TE with 30 percent of first-enlistment personnel are presented in Table 32. Although several of these tasks are performed by first-enlistment personnel, only 20 tasks are rated high in training emphasis and only 7 of these tasks are performed by 30 percent or more of first-termers. Training personnel are encouraged to review tasks which are related but not referenced to POI 90730 to determine where it is most appropriate to train for these tasks (basic course, OJT, other form of training), or if these tasks should be covered in any form of structured training.

### Plan of Instruction (POI) 3ABY90830

The initial training program for the Environmental Medicine personnel is divided into two courses: Veterinary-related course (8 weeks in length taught at Fort Sam Houston by the Army) and Environmental Medicine - 3ABY90830 (6 weeks in length, and taught at School of Aerospace Medicine, Brooks AFB). Both of these courses make up a basic training program intended to train personnel new to this career ladder. Instructions include subsistence inspections of foods, food establishments, and food service facilities; conducting periodic environmental health surveys; collecting and compiling epidemiological and occupational health data; evaluating health programs; and inspecting food facilities processing, serving, and storing food.

The current plans of instruction for initial training of DAFSC 908X0 respondents were examined. Based on the assistance from experienced technical school subject-matter specialists, a matching of inventory tasks to the POI was accomplished, and computer products were generated displaying the results of the matching process. Data included TE and TD ratings, percent members performing for first-job (1-24 months TAFMS) and first-enlistment (1-48 months TAFMS) personnel.

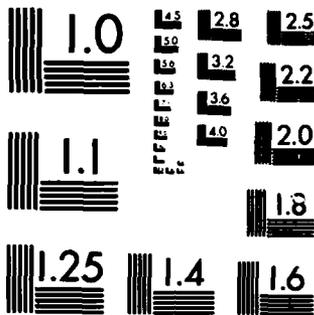

### Basic Course 90830 (Fort Sam Houston)

The occupational survey data supported a majority of the course objectives for the 90830 course taught at the Academy of Health Sciences at Fort Sam Houston. Some COs did not have tasks identified as relating to them. Some of these areas may be viewed by training personnel as relating to knowledge. A complete list of the objectives which had no tasks relating to them are as follows:

#### CO

- 81-500-001 - Veterinary food inspector responsibilities
- 81-500-002 - Posting procedures
- 81-500-003 - Computing inspection date
- 81-500-004 - Selecting frequencies for Veterinary to read Standards of Conduct
- 81-500-005 - Selecting category of Veterinary food inspection
- 81-500-006 - Selecting agencies involved in the procurement
- 81-500-011 - Identifying the appropriate DPSC-SIM and subsection
- 81-500-012 - Determining food temperatures
- 81-500-015 - Identifying sources of food items
- 81-500-019 - Identifying acceptable Food and Drug Administration labels
- 81-500-025 - Identifying DOD food inspection stamps
- 81-500-026 - Identifying nonconformance food inspection situations

MICROCOPY RESOLUTION TEST CHART  
NATIONAL BUREAU OF STANDARDS-1963-A

- 81-500-030 - Identifying military insanitary conditions of storage situation involving subsistence
- 81-500-033 - Selecting responsibilities of the Veterinary food inspection specialist at a Naval/Marine Corps installation
- 81-500-037 - Completing 91R10 tasks

These unmatched objectives involve 31 hours of training. Training personnel should review the above listed objectives to determine if there are tasks which should be matched to these objectives which were either omitted or inaccurately matched. After a thorough review and complete understanding of the unmatched objectives, a decision should be made as to whether those portions of the course should be taught to Air Force personnel.

#### Basic Course 3ABY90830 (Brooks AFB TX)

This 6-week Environmental Medicine Course is a continuation of the training necessary to perform the tasks and duties required of beginning environmental medicine personnel. The 3-skill level is awarded upon completion of this training course. The current plan of instruction for Course 3ABY90830, dated 12 June 1984, was examined using tasks matched by experienced personnel from the School of Aerospace Medicine, Brooks AFB TX, to criterion objectives (CO). This course was also reviewed for appropriateness of instruction as indicated by tasks performed by survey respondents. A complete printout of the results of the matching of tasks to POI objectives is provided in FCPRT6 within the training extract.

Data provided by these matchings can be used as a basis for considering what items should be taught in the basic course, based on tasks performed by entry level personnel. The occupational survey data support the course objectives (CO) which had tasks matched to them. All technical-related COs have tasks matched to them. The only unmatched objectives are subdivisions of matched objectives. Subject-matter specialists indicated this was a matter of the extent of the subdivision and further matching would provide no more useful information.

Four hundred and seventy-eight tasks were not referenced to the two 90830 POIs. Most of these tasks are related to the 907X0 career field. While other nonreferenced tasks may be taught in advanced courses or OJT and some are supervisory functions. Examples of related tasks performed by 30 percent or more of the first-enlistment personnel are presented in Table 33. Although 31 of these tasks have high TE ratings, only 14 are performed by 30 percent or more first-enlistment personnel. Training personnel are encouraged to review tasks related, but not referenced, to these POIs to determine whether they should be included in the course or not.

## ANALYSIS OF CONUS VERSUS OVERSEAS GROUPS

A comparison was made of the tasks performed and the background data for DAFSC 90750 respondents assigned CONUS versus those in overseas locations and 90850 respondents assigned CONUS versus those assigned to overseas locations. Comparisons between the functions performed and background data of airmen assigned CONUS versus those assigned overseas can provide useful information for trainers and managers.

DAFSC 90750 CONUS versus Overseas. An analysis of task performance differences between the 234 AFSC 907X0 5-skill level incumbents assigned within CONUS and the 106 5-skill level incumbents stationed overseas reveals little or no difference between the jobs performed. They are performing basically the same tasks and are spending similar amounts of time doing so. The average number of tasks performed by these groups are 84 for CONUS and 84 for the overseas group.

DAFSC 90850 CONUS versus Overseas. An analysis of task performance differences between the 280 AFSC 908X0 5-skill level incumbents assigned within CONUS and the 69 5-skill level incumbents stationed overseas reveals very few differences between these two groups. CONUS members perform an average of 84 tasks versus the overseas group performing an average of 102 tasks. Subsistence inspections were slightly more common for overseas personnel than for the CONUS group (36 percent versus 27 percent members performing, respectively). Minor task differences were also noted. Table 34 presents examples of those tasks, showing the greatest difference in percent members performing between 90850 CONUS and 90850 overseas personnel.

## ANALYSIS OF MAJOR COMMAND GROUPS

In addition to examining the job structure of the Bioenvironmental Engineering and the Environmental Medicine career ladders, how personnel work within various commands were also examined. For both 907X0 and 908X0 personnel, AAC, USAFE, AFLC, AFSC, ATC, MAC, PACAF, SAC, TAC, and SPACECMD made up 99 percent of the overall manning and survey sample.

AFSC 907X0 Major Command Analysis. A thorough examination of field data to highlight differences, if any, in jobs across major commands reveals no major differences in jobs performed by 907X0 Bioenvironmental Engineering personnel across major commands. Only a slight difference exists with those who are assigned to the technical school as they are more involved with training.

AFSC 908X0 Major Command Analysis. By and large, the jobs performed by the 908X0 major command groups are very similar and primarily involve subsistence, food, and food serving facilities inspections. The notable exceptions

TABLE 34

TASKS WHICH BEST DIFFERENTIATE BETWEEN 908XO CONUS AND OVERSEAS GROUPS  
(PERCENT MEMBERS PERFORMING)

TASKS	CONUS	OVERSEAS	DIFFERENCE
H434 CONDUCT TUBERCULOSIS DETECTION INTERVIEWS	38	63	25
I318 PERFORM CLASS 4 INSPECTIONS OF FRUITS AND VEGETABLES	38	58	20
G422 PREPARE WRITTEN REPORTS OF INSPECTIONS OF BASE FOOD SERVING FACILITIES	36	54	18
G403 PERFORM MEDICAL EVALUATION OF ON-BASE FOOD STORAGE FACILITIES	40	57	17
F315 PERFORM CLASS 4 INSPECTIONS OF DAIRY PRODUCTS	41	58	17
G412 PERFORM MEDICAL EVALUATION OF OTHER ON-BASE PLACES OF PUBLIC ASSEMBLAGE, SUCH AS THEATERS OR BOWLING ALLEYS	40	57	17
G410 PERFORM MEDICAL EVALUATIONS OF ON-BASE FOOD SERVING AND PREPARATION FACILITIES	45	61	16
H444 MONITOR INH PATIENT TREATMENT PROGRAMS	35	49	14
G407 PERFORM MEDICAL EVALUATIONS OF ON-BASE FOOD STORAGE FACILITIES	41	55	14
H442 MAINTAIN INDIVIDUAL TUBERCULOSIS CONTROL PROGRAM RECORDS	33	46	13
G399 ISSUE FOOD HANDLER TRAINING CERTIFICATES	41	53	12
G414 PERFORM MEDICAL EVALUATIONS ON ON-BASE CHILD CARE CENTERS	41	53	12
G417 PREPARE AF FORMS 977 (FACILITY INSPECTION FORM)	53	64	11
H432 CONDUCT SEXUALLY TRANSMITTED DISEASE (STD) CONTROL INTERVIEWS	39	49	10
G394 CONDUCT SURVEILLANCE CHECKS OF FOOD HANDLERS' HEALTH CERTIFICATES	41	51	10

are AFSC and ATC who differ slightly because of their involvement with training, laboratory animal medical care, and supporting animal research programs. Table 35 indicates that ATC and AFSC personnel are more involved with animal functions than any of the other major commands.

Major Command Summary. AFSC 907X0, Bioenvironmental Engineering personnel, perform the same basic job, regardless of command assignment. The 908X0 Environmental Health personnel perform primarily the same job with the exception of AFSC and ATC who are slightly more involved with laboratory animal care and animal research programs.

#### COMPARISON OF CURRENT SURVEY TO PREVIOUS SURVEY

The results of this survey were compared to the results of the August 1973 and December 1978 907X0 surveys, and the results of the November 1970, November 1976, and March 1980 908X0 surveys.

907X0 OSR Comparison of Current and Previous Results. Over the past several years, several changes (including name changes) have occurred within the Bioenvironmental Engineering career ladder, as discussed in the History within the INTRODUCTION and CAREER LADDER STRUCTURE sections of this report. As a result of these changes, findings of the two previous reports reflect some differences in jobs identified. As mentioned in the CAREER LADDER STRUCTURE section, there seems to be a trend toward less specialization in the current study than the previous one.

Except for the above differences, other data, such as job satisfaction and skill level analysis, remain similar. The 907X0 career ladder has experienced some changes in functional responsibilities since the 1978 study; however, subject-matter specialists perceive this career ladder will be stable for the future.

908X0 OSR Comparison. The 908X0 career ladder has progressed through various changes (as discussed in the history presented in the INTRODUCTION and CAREER LADDER STRUCTURE sections of this report). Generally, the previous studies reported relatively similar findings with only minor differences appearing in areas such as job satisfaction indicators (job interest, perceived utilization of talents and training, and reenlistment intentions), and job structure groups. Job satisfaction indicators for the first-enlistment groups either remained constant or increased for members of the current study. The major jobs are slightly different for the current and the 1980 survey; not as many jobs within major groupings are identified in the current OSR as in the previous one for several reasons: personnel perform broader and less specialized jobs; changes in functional responsibilities; and merger of some functions. The jobs of AFSC 908X0 incumbents are broader and less specialized than the pattern of jobs identified in previous studies.

## OTHER ANALYSES

In addition to information related to tasks and duties, each survey respondent was requested to fill out a general background information section. This section provides biographical and specialty-related data which may be used to address specific issues raised by career ladder personnel. A brief discussion of strength and stamina is presented below. The remainder of the above mentioned data are presented in tabular form (Tables 36 through 40).

The experienced 7-skill level personnel who provided the task difficulty ratings also assisted in identifying problems associated with the performance of tasks and duties relative to strength and stamina. These personnel were asked to identify specific tasks which required excessive strength or stamina to perform. The responses to the strength and stamina questions were analyzed and no problems were identified.

## IMPLICATIONS

Occupational survey data indicate Bioenvironmental Engineering career ladder and Environmental Medicine career ladder personnel are performing the jobs they were designated to perform, with very minor exceptions. The separation of clusters, job types, subclusters, and independent job types are the result of differences in time spent on core tasks and the performance of specialized Bioenvironmental Engineering or Environmental Medicine functions. Other differences in tasks performed emerged as a result of members in both 907X0 and 908X0 personnel gaining experience in their respective career ladders and taking on additional supervisory, management, and training functions inherent in attaining seniority. In 11 major job groups, 907X0 personnel are performing functions primarily related to Bioenvironmental Engineering duties and 908X0 personnel are performing functions distinctly related to the Environmental Medicine activities. There is little overlap in technical responsibilities. The current classification structures for both 907X0 and 908X0 career ladders are supported by survey data.

Specialty documents were evaluated and some were recommended for review by training management personnel. The AFR 39-1 Specialty Descriptions for both AFSC 907X0 and 908X0 are generally descriptive of the career ladders. A majority of the 907X0 and 908X0 STS items are supported by OSR data but large numbers of tasks are not referenced to any area of either STS. The POIs for courses 90730 and 90830 generally are supported by survey data, however, a large number of tasks are not referenced to any area of either POI. Most POI blocks have tasks matched to them, however, the basic course taught at Fort Sam Houston has several unmatched COs. Nonreferenced tasks and objectives for both 907X0 and 908X0 courses should be examined in detail to determine the status of the COs and whether nonreferenced tasks should be covered by the respective documents.

Job satisfaction indicators reveal that most 907X0 and 908X0 respondents find their jobs interesting and feel their talents and training are adequately utilized.

THE FOLLOWING ARE IN DESCENDING ORDER BY PERCENT MEMBERS PERFORMING:

TASKS	PERCENT MEMBERS PERFORMING
F375 PREPARE DD FORMS 1222 (REQUEST FOR AND RESULTS OF TEST)	95
F299 INSPECT DAMAGED SUBSISTENCE ITEMS	95
F369 PERFORM ORGANOLEPTIC EXAMINATIONS	94
F315 PERFORM CLASS 4 INSPECTIONS OF DAIRY PRODUCTS	94
F388 SAFEGUARD FOOD INSPECTION STAMPS	93
F304 INSPECT SUBSISTENCE ITEMS TO BE OFFERED FOR REDUCED PRICE SALES IN COMMISSARIES	93
F316 PERFORM CLASS 4 INSPECTIONS OF EGGS	92
F354 PERFORM CLASS 8 INSPECTION OF MISCELLANEOUS SUBSISTENCE PRODUCTS	92
F303 INSPECT SANITARY CONDITIONS OF CONTAINERS OR VEHICLES USED FOR SHIPMENT OF SUBSISTENCE ITEMS	92
F319 PERFORM CLASS 4 INSPECTIONS OF MEAT	92
F364 PERFORM CLOSED CAN INSPECTIONS	92
F389 TEST WEIGHT SUBSISTENCE ITEMS	91
F320 PERFORM CLASS 4 INSPECTIONS OF MISCELLANEOUS SUBSISTENCE PRODUCTS	91
F318 PERFORM CLASS 4 INSPECTIONS OF FRUITS OR VEGETABLES	90
F360 PERFORM CLASS 9 INSPECTIONS OF MISCELLANEOUS SUBSISTENCE PRODUCTS	89
F352 PERFORM CLASS 8 INSPECTIONS OF FRUITS OR VEGETABLES	89
F289 CONDUCT HOBART FAT ANALYSIS ON CLASS 4, 5, 7, 8, AND 9 GROUND MEAT TINES	88
F302 INSPECT PACKAGING OR PACKING	88
F368 PERFORM OPEN CAN INSPECTIONS	88
F349 PERFORM CLASS 8 INSPECTIONS OF DAIRY PRODUCTS	88
F353 PERFORM CLASS 8 INSPECTIONS OF MEAT	87
F371 PREPARE AF FORMS 1553 (NET WEIGHT EXAMINATION RECORD)	87
F294 DETERMINE EXPECTED SHELF LIFE OR CONDITION OF GOODS	87
F377 PREPARE DD FORMS 1237 (REPORT OF INSPECTION OF SHELL EGGS)	86
F310 MAINTAIN VENDOR QUALITY HISTORY RECORDS	86
F305 MAINTAIN AF FORMS 1148 (DAILY VETERINARY FOOD INSPECTION RECORD-CLASSES 4, 5, AND 8)	85
F322 PERFORM CLASS 4 INSPECTIONS OF POULTRY	85
F327 PERFORM CLASS 5 INSPECTIONS OF FRUITS OR VEGETABLES	85
F309 MAINTAIN TARE WEIGHT INFORMATION	84

PERCENT OF SAMPLE: 2

AVERAGE GRADE: E-5

AVERAGE TICF: 94 MONTHS

AVERAGE TAFMS: 113 MONTHS

THE FOLLOWING ARE IN DESCENDING ORDER BY PERCENT MEMBERS PERFORMING:

TASKS	PERCENT MEMBERS PERFORMING
I546 RESTRAIN ANIMALS BY PHYSICAL METHODS	96
I557 WEIGH ANIMALS	96
J608 PERFORM HEALTH CHECKS ON LABORATORY ANIMALS	96
I544 RESTRAIN ANIMALS BY CHEMICAL METHODS	96
I473 COLLECT BLOOD SAMPLES	96
I469 CALCULATE DRUG DOSAGES	96
I482 EUTHANATIZE ANIMALS	96
J597 MAINTAIN INDIVIDUAL LABORATORY ANIMAL RECORDS	92
J559 APPLY IDENTIFICATION MARKINGS TO LABORATORY ANIMALS	92
J590 FEED OR WATER LABORATORY ANIMALS	92
I455 ADMINISTER ANESTHETICS BY INTRAMUSCULAR METHOD	92
I456 ADMINISTER ANESTHETICS BY INTRAVENOUS METHOD	92
J616 PREPARE DAILY OR WEEKLY ANIMAL INVENTORY FORMS	92
I467 ADMINISTER ORAL MEDICATIONS	92
J615 PREPARE DAILY HEALTH CHECK FORMS ON LABORATORY ANIMALS	92
I462 ADMINISTER INJECTIONS OR IMMUNIZATIONS BY INTRAMUSCULAR METHODS	92
J611 PERFORM TB TESTING OF ANIMALS	92
I474 COLLECT FECAL SAMPLES FOR LABORATORY ANALYSIS	92
I465 ADMINISTER INJECTIONS OR IMMUNIZATIONS BY SUBCUTANEOUS METHOD	92
I545 RESTRAIN ANIMALS BY MECHANICAL METHODS	88
J595 LOAD OR OFF-LOAD RESEARCH ANIMALS	88
I464 ADMINISTER INJECTIONS OR IMMUNIZATIONS BY INTRAVENOUS METHOD	88
I468 BANDAGE SURGICAL WOUNDS	88
I483 EXAMINE ANIMALS FOR EXTERNAL PARASITES	88
J558 ACCEPT SHIPMENTS OF LABORATORY ANIMALS	83
I470 CARE FOR ANIMALS IN POST-OPERATIVE STATUS, SUCH AS MONITOR RECOVERY FROM ANESTHESIA	83
J612 PLACE CATHETERS INTRAVENOUSLY	83
I476 COLLECT SWAB SAMPLES OF LABORATORY ANIMALS	83
J599 MAINTAIN RECORDS OF IDENTIFICATION SYSTEMS FOR LABORATORY ANIMALS	79
J604 MONITOR ANIMAL USE AND CARE CONDITIONS	79
I509 PERFORM ENDOTRACHEAL INTUBATIONS	79
J562 CHANGE BEDDING OF ANIMAL CAGES	79
I471 CLEAN OPERATING ROOMS, SURGICAL SUITES, OR NECROPSY ROOMS	79
I491 MAINTAIN ASEPTIC CONDITIONS IN TREATMENT OR SURGERY ROOMS	79
I466 ADMINISTER INTRAVENOUS DRIPS TO ANIMALS	79

TABLE A28

GROUP ID NUMBER AND TITLE: GRP254, LABORATORY ANIMAL RESEARCH SUPPORT PERSONNEL

GROUP SIZE: 5

PERCENT OF SAMPLE: LESS THAN 1%

AVERAGE GRADE: E-6

AVERAGE TICF: 147 MONTHS

AVERAGE TAFMS: 166 MONTHS

THE FOLLOWING ARE IN DESCENDING ORDER BY PERCENT MEMBERS PERFORMING:

TASKS	PERCENT MEMBERS PERFORMING
J604 MONITOR ANIMAL USE AND CARE CONDITIONS	100
B112 SUPERVISE ENVIRONMENTAL MEDICINE SPECIALIST (AFSC 90850)	100
B62 COUNSEL PERSONNEL ON PERSONAL OR MILITARY-RELATED MATTERS	100
J599 MAINTAIN RECORDS OF IDENTIFICATION SYSTEMS FOR LABORATORY ANIMALS	100
B116 SUPERVISE PERSONNEL WITH AFS OTHER THAN 907X0 OR 908X0	100
B77 DIRECT MAINTENANCE OF FACILITIES OR WORK AREAS	100
J590 FEED OR WATER LABORATORY ANIMALS	100
A4 DETERMINE WORK PRIORITIES	100
C137 EVALUATE MAINTENANCE OR USE OF WORKSPACE, EQUIPMENT, OR SUPPLIES	100
B97 INTERPRET POLICIES, DIRECTIVES, OR PROCEDURES FOR SUBORDINATES	100
J560 ASSIGN ANIMALS TO HOLDING FACILITIES OR RESEARCH INVESTIGATORS	100
A52 WRITE JUSTIFICATIONS FOR PROCUREMENT OF EQUIPMENT, SUPPLIES, OR WORK AREAS	100
J572 CONFER WITH COMMERCIAL DRUG OR EQUIPMENT SALESMEN	100
I546 RESTRAIN ANIMALS BY PHYSICAL METHODS	100
A17 PARTICIPATE IN MEETINGS, SUCH AS STAFF MEETINGS, BRIEFINGS, CONFERENCES, OR WORKSHOPS	100
A16 ESTABLISH WORK SCHEDULES	100
B76 DIRECT MAINTENANCE OF ADMINISTRATIVE FILES	100
J544 EVALUATE CONDITIONS FOR TRANSPORTATION OF RESEARCH ANIMALS	100
J595 LOAD OR OFF-LOAD RESEARCH ANIMALS	100
J608 PERFORM HEALTH CHECKS ON LABORATORY ANIMALS	100
I482 EUTHANATIZE ANIMALS	100
B54 ASSIGN PERSONNEL TO DUTY POSITIONS	100
I469 CALCULATE DRUG DOSAGES	100
J611 PERFORM TB TESTING OF ANIMALS	100
A40 SCHEDULE TEMPORARY DUTY, LEAVES, OR PASSES	100
A12 DRAFT, DEVELOP, OR REVISE FORMS	100
B93 IMPLEMENT SAFETY PROGRAMS	100
I490 INCINERATE ANIMAL REMAINS OR CONTAMINATED WASTES	100
E260 MAINTAIN ADMINISTRATIVE FILES	80
E259 INVENTORY TOOLS, EQUIPMENT, OR SUPPLIES	80
